

Download and install IBM Data Studio Version 4.1.x

Downloadable files

Abstract

This document describes how to download and install IBM® Data Studio Version 4.1.x.

Download Description

IBM Data Studio is a no-charge offering that consists of the Data Studio client.

The **Data Studio client** provides an integrated development environment for instance and database administration, routine and Java application development, and query tuning that can be installed with other IBM software products so that they can share a common environment.

Important: The Data Studio web console is no longer supported, however you can easily perform the same tasks with our replacement offering, the IBM Data Server Manager(DSM). You can download DSM from the [IBM Support Portal](#), and get detailed installation and configuration information at the [DSM Knowledge Center](#).

For more details about this release, see the following resources:

- [What's New and Changed in IBM Data Studio](#)
- [Overview of IBM Data Studio](#)

For information about the high level features in IBM Data Studio and the databases that are supported, see [IBM Data Studio features: by data server and component](#) on the support site.

Prerequisites

You must meet the following prerequisites to install IBM Data Studio:

- For the client, approximately 2GB of disk space is required for the product package installation.
- For the Data Studio client, you need Installation Manager Version 1.8.7 or later.

Installation Manager Version 1.8.7 is included with the Data Studio client. You can also obtain the latest version of Installation Manager from the following support site:

<http://www.ibm.com/support/docview.wss?uid=swg27025142>.

For a complete list of the hardware and software requirements, see [System requirements for IBM Data Studio](#).

Before you begin

Important:

- In the Data Studio V4.1.3, eclipse is upgraded to Eclipse Neon(4.6.3).
- Upgrade scenario DS 4.1.2 to 4.1.3 is not supported.
- If you previously installed 32-bit products on your computer with a 32-bit version of Installation Manager, you must download the 32-bit version of the IBM Data Studio package because it includes a compatible 32-bit version of Installation Manager. You can then use the 32-bit package to install either a 32-bit or 64-bit version of the IBM Data Studio product.

Note: If Data Studio fails to start after you installed Version 4.1.3 on Windows 32-bit, see the troubleshooting instructions at the following link: <http://www-01.ibm.com/support/docview.wss?uid=swg22013128>.

- For Microsoft Windows 8, you must have administrator privileges and disable the user account control (UAC).

Installation Instructions

Use the following information to download IBM Data Studio Version 4.1.x and then perform a typical installation.

You download IBM Data Studio Version 4.1.x from the web. IBM Passport Advantage customers who have a DB2 license can also download IBM Data Studio Version 4.1.x from IBM Passport Advantage.

IBM Data Studio Version 4.1.x uses IBM Installation Manager to install the client. For complete installation instructions, see the following topics in the Data Studio Information Center:

- [Installing the Data Studio client](#)

Tip: Download the [Quick Start Guide for IBM Data Studio Version 4.1.1](#) to view a diagram of a typical installation and to help you install each component of IBM Data Studio.

Step 1. Click one of the following tabs to either download from the Web or from Passport Advantage:

Download from the web

Download from IBM Passport Advantage

Step 2. Click the following tab for the Data Studio component that you want to download and install:

- [Data Studio client](#)

Tip: See the following support page for information about the available fixes that you can download and install: [Fix packs for IBM Data Studio](#).

To download and install the Data Studio client Version 4.1.x:

- [Download the full Data Studio product image:](#)

You can also choose to download the full Data Studio image, which include a copy of IBM Installation Manager.

Downloading the full product image is useful when installing Data Studio on a computer without an internet connection or when you want to install Data Studio on multiple computers. For more information about installing Data Studio on multiple computers, see [Enterprise deployment of the IBM Data Studio client](#).

1. Download the client from the download table below.

Tips:

- You can use either the 32-bit or 64-bit versions of Installation Manager to install the either a 32-bit or 64-bit version of Data Studio.
- If you previously installed 32-bit products on your computer with a 32-bit version of Installation Manager, you must download the 32-bit version of the IBM Data Studio package because it includes a compatible 32-bit version of Installation Manager. You can then use the 32-bit package to install either a 32-bit or 64-bit version of the IBM Data Studio product.

2. Extract product package to a directory on your computer, for example: C:\temp\datastudio\.

Important: To avoid possible installation errors, the directory path where you extract the compressed product files must not exceed 90 characters in length.

- 2.1 If you install using the launchpad, a supported browser error message is shown.

Inside the installation directory of Data Studio, edit file:
/launchpad/browser.sh

Add this line

```
*Firefox/[1-9].*) return 0;;
```

3. From the directory where you extracted the product, run the executable file: 

- On Windows, run: launchpad.exe. 
- On Linux, run: launchpad.sh. 

Note: For Microsoft Windows operating systems:

- You must run this file as an administrator if you plan to perform an administrative installation.
- If you are not an administrator, and you are on a 64-bit version of Windows, you must run the launchpad_win_nonadmin64.exe file instead of the launchpad.exe file.

4. Follow the installation wizard steps in IBM Installation Manager to install the product.

Download IBM Data Studio client Version 4.1.x

Post-Installation Instructions

After you install the product, see the following topics for post-installation information:

- [Post-installation tasks for the Data Studio client](#)

If you plan to tune single SQL statements that run on DB2 for z/OS by using the Statistics Advisor and related tools, see [Configuring DB2 for z/OS Subsystems for the No-Charge Tuning Features](#).

Document information

More support for: [IBM Data Studio](#)
Installation/Migration

Software version: 4.1.1.0, 4.1.2.0, 4.1.3.0

Operating system(s): AIX, HP-UX, Linux, Solaris, Windows, z/OS

Reference #: 4037681

Modified date: 05 February 2018
